PROFESSIONAL SUMMARY

DevOps and Application Developer with 3+ years of hands-on experience automating enterprise-scale Oracle Fusion SaaS ERP environments. Proven track record of building production-grade CI/CD pipelines, shell and Python automation scripts, and patch deployment systems that eliminated manual effort and cut deployment time by 40%. Comfortable working across Jenkins, Docker, Kubernetes, and Oracle APEX, with a strong foundation in Linux, scripting, and Agile workflows.

TECHNICAL SKILLS

Languages: Python, Shell Scripting, Bash, Java

DevOps & CI/CD: Jenkins, Docker, Kubernetes, GitHub Actions, CI/CD Pipelines, Git

Development: Oracle APEX, REST APIs, Selenium WebDriver, Cucumber, API Testing & Validation

Databases: MySQL, MongoDB

Practices: Agile Methodology, Root Cause Analysis (RCA), Linux Administration, Patch & Release Management

WORK EXPERIENCE

Application Developer 1 • *Trigent Software — Client: Oracle (On-Site, Bengaluru)* Jul 2024 – Present

- Wrote production Shell and Python scripts that fully automated manual configuration steps across Oracle Fusion Application pods, cutting hours of repetitive work per deployment cycle.
- Migrated legacy VM-based automation scripts to GitHub and rebuilt them as Jenkins Pipeline workflows, enabling version-controlled, one-click patching and execution across teams.
- Built the end-to-end patch deployment interface for the PSCR government licensing and permits project using Oracle APEX, with direct Jenkins job triggers so developers could kick off deployments without CLI access.
- Diagnosed and resolved critical production issues — including Docker installation failures, pod performance bottlenecks, and patching errors — delivering formal RCA reports and permanent fixes.
- Collaborated with senior engineers and developers to tune CI/CD pipelines using Jenkins and ADE FABS, improving consistency across multiple Fusion pod environments.

DevOps Engineer / Automation Engineer • *Unidad Techno Labs Pvt Ltd (On-Site, Bengaluru)* Mar 2023 – Jun 2024

- Designed and deployed multi-stage Jenkins CI/CD pipelines from scratch, reducing deployment time by 40% across several client applications.
- Set up nightly build and regression jobs with automated GitHub code pulls and email alerts on failures, so the team always had a clean build to work from each morning.
- Wrote MongoDB shell queries and Linux scripts to speed up debugging and data validation during active deployments.

KEY PROJECTS

Oracle Fusion Pod Automation | Oracle via Trigent Software

Technologies: Python, Shell Scripting, Jenkins, Docker, GitHub

- Built a full suite of parameterized automation scripts for Oracle Fusion pod configuration, replacing entirely manual processes that previously took significant engineering time.
- Moved all legacy VM scripts into GitHub and integrated them with Jenkins pipelines, giving the team one-click patching and traceable execution history.
- Standardized configuration across multiple Fusion environments, significantly reducing human error in deployments.

PSCR Patch Deployment System | Oracle via Trigent Software

Technologies: Oracle APEX, Jenkins, REST APIs, Shell Scripting

- Designed a clean APEX-based web interface for managing patch deployments on the PSCR government platform, replacing ad-hoc CLI processes.
- Wired APEX forms to backend Jenkins jobs through REST APIs, so developers could trigger and monitor deployments through a browser without needing server access.

- Delivered a scalable and auditable patch management workflow for a live Oracle Fusion SaaS ERP system used in government licensing operations.

Jenkins CI/CD Pipeline Automation | Unidad Techno Labs

Technologies: *Jenkins, GitHub, Linux, MongoDB*

- Built multi-stage pipelines that cut release cycles by 40% and brought consistency to deployments across multiple client projects.
- Automated nightly regression builds with GitHub webhook integration and failure alerting, reducing manual monitoring overhead.
- Supported deployment validation using MongoDB queries and Linux shell scripts to catch data issues before they hit production.

EDUCATION

B.E. in Electrical and Electronics Engineering 2018 – 2022

CMR Institute of Technology, Bengaluru

ACHIEVEMENTS

- 3+ years delivering production automation on Oracle Fusion SaaS ERP at enterprise scale, including infrastructure for government licensing platforms.
- Reduced deployment time by 40% and removed manual configuration overhead across multiple live production environments.
